(54) Title: **CIRCUIT FOR AUTOMATIC TERMINATION OF A BUS NETWORK**

(57) Abstract: An electronic circuit for terminating a plurality of conductors at a node of a network, comprising means to detect current flowing through one of the conductors and means to switch between a continuing circuit, whereby continuity of the network is maintained, on detecting current above a first predetermined threshold, and a terminating circuit, whereby the network is terminated with an appropriate terminating circuit, upon detection of current at, or below, a second predetermined threshold.
